RECENT DEVELOPMENTS

The section entitled “Recent Developments” on page 86 of the Base Prospectus, as supplemented, shall be completed by the following press releases:

“The following recent developments have been published by ENGIE:

Press release dated 9 March 2023

“CEVA Logistics, ENGIE and SANEF launch an alliance to decarbonize road freight transport

- The *European Clean Transport Network Alliance* (ECTN Alliance) brings together best-in-class experts in logistics, transport and energy, and aims to accelerate the decarbonization of long-haul trucking in Europe.
- ECTN Alliance’s objective is to develop an unprecedented network of relay terminals for trucks strategically located on European motorways and equipped with highpower electric chargers and pumps for biogas and green hydrogen.
- When operational, the ECTN solution will address current battery capacity issues and significantly improve truck drivers’ working conditions by allowing them to travel shorter distances.
- The first test planned along SANEF motorways will start in 2023.

Three major groups are joining forces to fight climate change and launch the European Clean Transport Network Alliance (ECTN Alliance), a concrete solution to decarbonize road freight transport.

Mobilizing the expertise of its founding members—CEVA Logistics, ENGIE and SANEF—the ECTN Alliance envisions building and operating a network of truck terminals with low carbon energy solutions to transport merchandise along Europe’s motorways. The disruptive system will be tailored to electric trucks’ limited range and charging requirements.

Long term, the terminal network will be open to all shippers and carriers, offering simple access to low-carbon biogas, hydrogen and electric energy solutions for charging and refueling trucks. Strategically placed on European motorways, the network will include a specific IT solution to enable transport companies to plan their routes and charging schedules in the fastest and most carbon-efficient way.

In addition, the concept aims at improving working conditions for long-haul truck drivers by allowing them to remain closer to their homes, as they will be swapping trailers at each terminal before turning back. ECTN’s

solution will ultimately make the trucking industry more attractive and help alleviate the European truck driver crisis.

The Alliance will conduct a proof of concept (POC) in 2023 between the Lille and Avignon metropolitan areas in France to demonstrate the feasibility of the concept before deploying it on a European scale.

The two-year proof of concept will start in 2023 to demonstrate the ECTN model's effects on long-distance road haulage. A dedicated fleet of 20 low-carbon tractor units (a mix of biogas, electric and green hydrogen) will transport 20 trailers each day between the north and southeast of France, relaying and changing trailers at five test sites located at existing CEVA Logistics locations.

Local carriers will carry out the pre- and post-carriage transport to and from the test sites. The POC is expected to provide a rich database for an in-depth understanding of lowcarbon truck use for long-distance haulage and options for decarbonizing road freight transport in Europe.

Luc Nadal, Regional Managing Director for Europe, CEVA Logistics, said: *“ECTN Alliance members strongly believe that private–public alliances have a key role to play in accelerating climate solutions. The ECTN Alliance is based on a pioneering, holistic approach to decarbonizing long-haul trucking. We are proud to launch this bold initiative with best-in-class companies, whose combined expertise will contribute to the success of the project.”*”
