FY 2023: EXTENDING OUR TRACK RECORD OF STRONG PERFORMANCE

Another strong financial performance reaching our upgraded guidance range

Further rapid roll-out of our strategy with expansion in renewables and pivotal move in batteries

Continued progress in our **Net Zero trajectory**

Fundamental de-risking with final agreement on Belgian nuclear

Transition plan assessment

Moody's assessed ENGIE transition plan with a NZ-2 rating:
- ambition aligned **with a 1.5°C trajectory**
- a "solid" level on the implementation of objectives

SBTI certification

ENGIE **certified by SBTi** following a **well below 2°C trajectory**

Coal exit

Announced **disconnection** of **2 units** in Chile in 2025 and the **conversion** of a **third unit**

¹ Greenhouse gases, Scope 1 and 3 (MtCO₂ eq)

² These results benefitted from a lower utilization rate of the combined cycle gas plants in Europe under the combined effect of mild temperatures and the normalization of market conditions

CONTINUOUS RAPID ROLL-OUT OF OUR STRATEGIC PLAN

RENEWABLES

- **41.4 GW¹** of installed capacity
- **3.9 GW¹** added capacity in 2023
- **6.3 GW¹** under construction

ENERGY SOLUTIONS

- DHC: **€2.7bn order intake** in 2023
- On-site energy production: **250 MW** of capacities commissioned in 2023

ENGIE

GEMS

NETWORKS

- New tariffs for **French networks**
- **Brazil**: partial sale of TAG (gas) stake; awarded a 30-year concession to build and operate 1,000 km of power transmission lines
- **Biomethane**: acquisition of Ixora in UK, 10.8 TWh/y capacity connected to ENGIE's network in France
- **Gas storage levels at 84 % in France** as of 31 December 2023

FLEX GEN & RETAIL

FLEX GEN

- Acceleration in battery storage: acquisition of **BRP**, commissioning of **Hazelwood**

RETAIL

- Smooth transition with the **end of gas regulated offers in France**
- **Historically low churn rates** and **high Net Promoter Score** in all our countries

BESS: A PIVOTAL YEAR, BOOSTING OUR FLEXIBLE GENERATION

NUCLEAR: A FUNDAMENTAL DE-RISKING OF THE GROUP

Final agreement between ENGIE and Belgian State

- 10-year extension of Doel 4 and Tihange 3 targeting a re-start as of November 2025 through *Flex LTO*
- JV dedicated to the 2 units equally owned with the Belgian State with a Contract for Difference-type mechanism
- Agreement on a fixed amount of €15bn related to the transfer of all nuclear waste liabilities

On track, with a closing expected by the end of 2024

**Eliminates longstanding uncertainty regarding
all future nuclear waste liabilities**

FINANCIAL PERFORMANCE HIGHLIGHTS

- EBIT (excl. Nuclear) up 18%
- NRIs at €5.4bn
- Strong cash flow generation recovery, CFFO up €5.1bn
- Slight increase in credit ratios, as expected and well below <4.0x guidance
- Proposed dividend at €1.43

organic decrease

• **EBIT organic drivers:**

- Lower volumes distributed, higher energy costs on transmission & distribution in France, increasing staff costs driven by inflation leading to unprecedented high amount to be recovered at €0.9bn
- Additional revenues from capacity subscribed for gas transit between France and Germany
- Higher margins for storage in the UK and Germany in a volatile price context
- Strong performance of gas assets in Latin America
- Full commissioning of Novo Estado power transmission line in Brazil

organic decrease

- **Local energy networks:** strong operational performance, partly offset by lower energy prices and negative impact of strikes in France
- **On-site energy production:** lower DBSO margins in the US due to a change to the consolidated business model, partly offset by capacity commissioning
- **Energy performance management:** contract optimization and portfolio cleaning, increased selectivity in business development
- **One-offs:** 2023 cost overruns on 2 specific cogeneration installation contracts in the US (€150m) and non-recurring tax impact on Tabreed in 2023 (€38m)

- **Scope & FX:** negative FX and scope (Pampa Sul coal plant sale closed in May 2023 & BRP acquisition in October 2023)
- **Prices:** market normalization impacting load factor in Europe, partly offset by improvement in Chile with reduction of short positions and lower sourcing prices
- **Volumes:** positive impact of reversal of high costs of 2022 outages in Europe, partly offset by stop of biomass operations in Rodenhuize in February 2023
- **Ancillaries / CRM:** lower ancillaries for European gas plants from a very high basis and higher CRM in 2023

Substantial contribution from GEMS

- GEMS:**
- A combination of favorable market drivers with highly positive impact for GEMS activities in H1 2023
 - Good performance on Client Risk Management & Supply
 - At the end of 2023, intraday volatility, absolute prices and geographical spreads were close to the 2021 situation reflecting a normalization of market conditions

GEMS

BALANCED EBIT CONTRIBUTION & POSITIVE MOMENTUM

- **Unprecedented market conditions** in 2022 and 2023 with significant cross-year and intra-year effects, including provisions building and release
- **Q3 and Q4 2023:** as expected decrease vs H1 due to market normalization and below normalized EBIT due to phasing effect
- **Strong contribution expected in 2024** driven by increased level of client risk management, continuation of provision reversal and multiyear high margin contracts locked-in
- **Underlying EBIT for 2024 close to €2.0bn**

PERFORMANCE PLAN

2021-2023 target exceeded

FY 2023 YTD achievement

- Loss-making activities
- Support functions
- Operational excellence

- **Operational excellence:** procurement, improved industrial performance, contract renegotiations and structure optimization
- **Support functions:** optimization offset by the inflationary environment
- **Loss-making activities:** net positive improvement, despite further need to improve, especially regarding EVBox
- **Strong momentum in operations,** bringing continued industrial improvement
- **New productivity upsides** leveraging data and technology

INTEGRATING NATURE IN GROUP'S STRATEGY

Biodiversity	Fresh water & Ocean	Biomass / Biomethane
		
Engaged in the act4nature international initiative Deployment of our SET label in 7 countries to preserve biodiversity around each renewable project	Signatory of the UN ocean principles Signatory of call to accelerate global action on water Reduction by 30% of the ratio “freshwater consumption to energy produced” since 2019	100% of sourced woody biomass traceable and certified from 2023 Energy crops New-built units: use of single-digit percentage at most of energy crops¹ Acquired units: phase-out plan implementation within 10 years – one-digit percentage for remaining energy crops²

1. ENGIE's biomethane units that are newly built must use a very low proportion of energy crops. The annual feedstock tonnage across the country must have energy crops as a single-digit percentage at most

2. If acquired existing biomethane plants are running with energy crops, a plan to phase out from energy crops, as soon as possible and the latest within 10 years (just transition for farmers), is implemented. If some dedicated energy crops shall remain, the average annual tonnage in the total portfolio of the country should represent a one-digit maximum percentage.
